March 10, 2016

The Honorable Jerry Moran  
Chairman  
U.S. Senate Appropriations Subcommittee on Agriculture, Rural Development Food and Drug Administration and Related Agencies  
129 Dirksen Senate Office Building  
Washington, DC 20510

The Honorable Robert Aderholt  
Chairman  
U.S. House of Representatives Appropriations Subcommittee on Agriculture, Rural Development, Food and Drug Administration and Related Agencies  
2362-A Rayburn House Office Building  
Washington, DC 20515

The Honorable Jeff Merkley  
Ranking Member  
U.S. Senate Appropriations Subcommittee on Agriculture, Rural Development Food and Drug Administration and Related Agencies  
190 Dirksen Senate Office Building  
Washington, DC 20510

The Honorable Sam Farr  
Ranking Member  
U.S. House of Representatives Appropriations Subcommittee on Agriculture, Rural Development, Food and Drug Administration and Related Agencies  
1016 Longworth House Office Building  
Washington, DC 20515

Dear Chairman Moran, Chairman Aderholt, Ranking Member Merkley, and Ranking Member Farr:

We, the undersigned organizations, are writing to request your support for $10 million in appropriations for Section 1433 Continuing Animal Health and Disease, Food Security, and Stewardship Research, Education and Extension Programs in the fiscal year 2017 Agriculture Appropriations bill. The 2014 farm bill includes an important expansion of Section 1433 to establish a new competitive research grants mechanism to address critical priorities in food security, one health and stewardship. The expanded authority came in response to a historic funding disparity for the animal sciences and represents a strong opportunity to address significant challenges facing animal agriculture.

Unfortunately, current funding by the United States Department of Agriculture (USDA) to support the animal sciences is not proportionate with the economic contributions of animal agriculture. In fact, investment in the animal sciences has been stagnant for many years, even for programs like the Agriculture and Food Research Initiative (AFRI) that have received increased funding in recent years. This disturbing trend was highlighted by National Academy of Sciences in its report “Critical Role of Animal Science Research in Food Security and Sustainability” that was released in 2015. The report recognizes the historic underfunding of animal sciences and calls for increased investments. This imbalance in support for animal science puts U.S. animal agriculture at a major disadvantage at a critical time when livestock and poultry producers are striving for global competitiveness, improving sustainability and working to feed a growing global population. The recent outbreak of avian influenza in the United States underscores the need to develop science based tools to prevent and mitigate the impacts of such outbreaks. A proactive research effort is needed to help address these threats and protect the nation’s animal agriculture industry.
Demand for food is expected to increase from 70 to 100 percent by 2050 and animal agriculture must be a major contributor to meet these needs. Meat consumption is estimated to increase by 73 percent, dairy consumption is estimated to increase 57 percent, and per capita egg consumption in developing countries is expected to rise by almost 40 percent.

As the world’s population grows and natural resources become limited, animal agriculture research is necessary now more than ever to improve efficiency in order to continue providing safe and abundant food supplies for the growing global community. It is imperative that the increased food production be done in a manner that will protect our natural resources while maintaining America’s global competitiveness in producing animals and animal products.

Advancements in animal science will play an important role in the future success of animal agriculture and the rural economy. Livestock and poultry sales account for 40 percent of all farm income. When feed crops consumed by livestock are included, the contribution to farm income is 60 percent. The United States must step up its investments in agriculture research to maintain its status as a leading producer of safe, affordable and abundant food and meet increasing demands.

The new competitive grants program in Section 1433 provides a mechanism to focus resources on high priority areas to help animal agriculture meet future challenges. It is important to get the new competitive program started as soon as possible. We respectfully request that $10 million be appropriated for Section 1433 in fiscal year 2016, as a first step toward the goal of meeting the program’s authorized level of $25 million. Please let us know if you have any questions or if we can be of any assistance as the FY 2016 appropriations process moves forward.

Sincerely,
